“We found that NCS International were able to provide us with the **best available information**, by virtue of their **extensive knowledge** of the energy industry.” Eraring Energy

About NCS International

NCS International is one of Australia’s foremost environmental certification bodies. Our Greenhouse Gas Verification services provide assurance to organisations that disclose greenhouse emissions voluntarily or for mandatory government-regulated programmes and emissions trading schemes.

NCS International Carbon Assurance Solutions

NCS International provides confidence to organisations managing risks and opportunities in the low carbon economy.

We provide:

- Gap Assessments
- NGER Compliance Audits
- ISO 14064-1 GHG Report Verification
- ISO 14064-2 Carbon Offset Verification
- Carbon Footprint Certification
- Carbon Neutral Certification
- Carbon Improvement Management
- Greenhouse Accounting Training

In addition to verification and certification, we offer additional recognition to organisations that commit to continual measurable GHG emission reductions over time.

Verification Standards & Criteria

Verification is provided to requirements of the international standard for greenhouse gases, ISO 14064, as well as other Greenhouse reporting criteria and standards that organisations choose to adopt.

The following standards and criteria are used for verification:

- For organisations and businesses reporting greenhouse emissions, carbon footprints or claiming they are carbon neutral:
 - ISO 14064 Greenhouse gases, Part 1: Specification for quantification and reporting of greenhouse gas emissions and removals for organisations; and/or
 - National Greenhouse and Energy Reporting legislation (NGER).
- For carbon offset and reduction projects that reduce or remove greenhouse emissions:
 - ISO 14064 Greenhouse Gases, Part 2: Specification for quantification, monitoring and reporting of greenhouse gas emission reductions or removal enhancements for projects.

“Good carbon management is fast becoming part of public and corporate policy. Having your carbon footprint independently audited and certified to international standards and benchmarks provides customers, regulators and stakeholders with a high level of confidence in our carbon-constrained economy.”

Nav Brah, Environment and Sustainability Services Manager

Verification Process

Application

Clients complete an application form to engage NCS International for greenhouse verification. The application form requires basic information of the organization and reporting facilities as well as the objectives, criteria, scope and required Level of Assurance for the Verification. Clients commit to a 3 year annual verification and certification cycle.

Document Review

Client completes a self-evaluation checklist detailing their organisation, facilities, and emissions data collection and processing systems and submits it together with the Greenhouse Gas report. The Verifier conducts a desktop review. As an option, the Verifier can assist with self-evaluation.

Pre-assessment

Verifiers undertake pre-assessment of the client’s organization to confirm operational boundaries, the greenhouse emissions inventory, emission measurement methods, organisational arrangements and data quality management and reporting systems.

Risk Analysis & Verification Planning

Verifiers perform a risk assessment to identify areas of greatest risk for material discrepancy in the report. A Verification Plan is then developed outlining audit resources, the verification schedule, and the required sampling, testing and verification activities.

Verification Audit

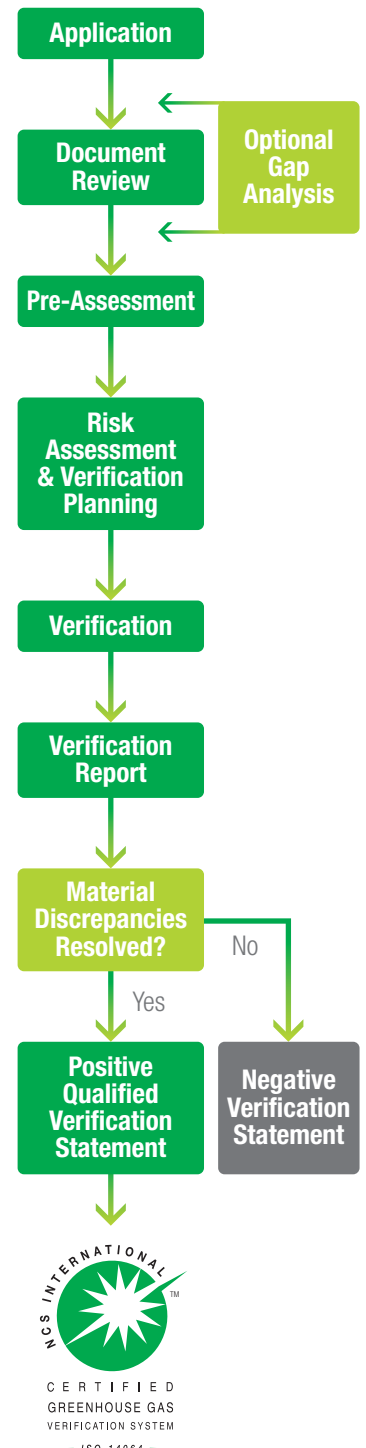

The Verification Audit involves evidence collection through interviews and facility visits; review of greenhouse information systems and controls; checking accuracy of computations and assessment against verification criteria.

Verification Report

Verification findings are reported to the client for review and client has the opportunity to resolve any material discrepancies.

Verification Statement and Certification

NCSI International issues a Verification Statement. A NCSI International Certificate attesting to an ISO 14064 Greenhouse Gas Verification System is awarded with all Verification Statements with positive conclusions.

**ASSURANCE
CONFIDENCE
TRANSPARENCY
RELIABILITY**

 **Environment**

 **Quality**

 **Food**

 **Safety**

NCS International (NCSI) have audit bases **across the world**, with professionals ready to assist you on your journey to **certification and registration**. NCSI has successfully met the needs of **many global clients** and has the ability to deliver certification against a **variety of standards and codes** across all continents.

Accelerate your performance

- Buy a Standard
- Attend training
- Book a Gap Audit
- Request a quote for certification
- Promote your certification
- Enhance your reputation
